

SWMS:

Introduction to Safe Work Method Statements “SWMS”

This short course is aimed at workers. It will provide them with the skills to interpret SWMS, have input into the development of SWMS, and follow SWMS in their day to day work routines in workshops and on construction sites

The Safe Work Method Statement is required by law for various aspects of work deemed as high risk. It is normal practice for a principal contractor to provide SWMS to their workers, and request SWMS from a sub-contractor or supplier prior to starting work on site

No matter what sector of the construction industry you are in, Safe Work Method Statements should be used as part of your risk control strategy.
